

CLIMATE ACTIVATOR CERTIFICATION

In the food sector, just like in the manufacturing and construction industries, the climate impact of products is becoming increasingly relevant. Neuteboom has insight into the CO₂ emissions of the coffee products that carry the Climate Activator logo.

We are actively reducing these emissions and compensating for what cannot yet be reduced. Through the **Climate Activator Certification** program by **Anthesis**, we ensure that our climate policy is consistently and firmly embedded in our organization and aligns with global agreements.

With the installation of a new (more efficient) roaster, LED lighting in production areas and offices, and the purchase of green electricity, gas, and sustainably certified coffee, we are on track to reduce CO₂ emissions by 25% by the year 2030.

All the measures we take to reduce CO₂ emissions and compensate for the remaining emissions through a mix of Gold Standard carbon credits, VCS Cookstoves, and VCS REDD+ Forest Projects in coffee-producing countries are annually assessed based on clear criteria by an independent Certification Body. This means that Neuteboom is authorized to use the Climate Activator Certified label for the products of its customers who have chosen the certification program by Anthesis.
